

# TamaWrap™

## VALUE

TamaWrap™ BLUE has been developed over several years through extensive trials alongside growers in Australia, the USA, and Brazil giving TamaWrap™ users an economical product choice.

Since launching our new Value Wrap in 2020, growers and contractors have seen remarkable performance on the bale.

TamaWrap™ Blue is the same thickness as TamaWrap+™, with a wider adhesive tail to keep the bale intact. This latest product development offers an economical option for TamaWrap™ users, whilst providing the same thickness of wrap as TamaWrap+ premium range.

Whilst many TamaWrap™ users will continue using TamaWrap+™, many growers, especially those in short travel distances from paddock to gin are pleased with the performance and cost savings.

\* TamaWrap™ BLUE approved and validated by John Deere in C7760 and C690 harvesters.

\* TamaWrap™ BLUE is validated, approved, and fully supported by Tama for use in C770 harvesters with a minor adjustment to the wrap feed system.

### Identical characteristics to our TamaWrap+™ premium wraps:

- Wrap length, width and thickness
- 4 RFID tags per wrap
- Tama Cut Indicator™
- Wrap portions per roll
- Rolls per pallet
- Developed, produced & fully supported by Tama

### TamaWrap™ offers significant cost reductions, and best suited where:

- Round modules are transported short distances
- Where round modules are not subject to flooding or adverse field conditions
- Where round modules are not required to be handled multiple times

**Quantity of Blue Available  
for next season:  
103,680 wraps (466 pallets)**
